

**GOST Nav-Tracker GPS Tracking System  
To Track Progress of Unique Circumnavigation  
Mobile CEO, Family To Embark on Three-Year Voyage Aboard Lagoon 500**

*The three-year circumnavigation of the Leonard family - Scott, Mandi, Griffin, Jake and Luke - aboard their Lagoon 500 Three Little Birds will be tracked by a GOST Nav-Tracker GPS Tracking System.*

FORT LAUDERDALE, FLORIDA (USA) – The Nav-Tracker GPS tracking system from boat security systems supplier Global Ocean Security Technologies (GOST – formerly Paradox Marine) will be used to monitor the progress of *Three Little Birds*, a Lagoon 500 catamaran. Boat captain Scott Leonard and his family (wife Mandi, sons Griffin, Jake and Luke) will embark on a unique three-year circumnavigation in July. During the voyage, Scott plans to become “The Mobile CEO” – running his multi-million dollar financial services firm while sailing around the world on a 50 foot boat.

“With so many people interested in following the progress of our trip, having GOST's Nav-Tracker GPS tracking system on our boat is critical to providing up to date, fully automated location information. Add to that the peace of mind provided with the geofence when we have to leave the boat in remote locations to return home for work” said The Mobile CEO, Scott Leonard.

GOST Nav-Tracker can be used to track a boat (or an entire fleet) from anywhere in the world with an internet connection. A boat can also be viewed on Google Earth and as new reports come in from Nav-Tracker, they are automatically updated to the site.

“With Nav-Tracker installed aboard *Three Little Birds*, we have an excellent opportunity to demonstrate the unique vessel tracking and monitoring capabilities of our system around the world,” said GOST President Jay Keenan.

When a Nav-Tracker transmitter is mounted on a vessel and armed, a wireless ‘geo-fence’ with a 500-meter radius is created. If a boat is moved outside of this fence, Nav-Tracker uses Inmarsat based GPS satellite technology to monitor a boat’s location and notify up to ten people by email and/or text message every 2 minutes with the latitude/longitude, speed and heading of the vessel.
